Shivam Patel

Senior Software Engineer

WORK EXPERIENCE

Unifai, Remote

Data insights product (SaaS) that democratizes leadership development throughout an organization. As a founding engineer I drove product development and architecture, turning pre-product written requirements into a fully productionalized application

Founding Full-Stack Engineer — 2022 – Present

- Owned frontend development and architecture of Unifai Web Application and an internal tool, establishing best engineering practices and building the application from scratch.
- Leveraged key technologies such as React, Typescript, SASS, React-Query and React-Router. Collaborated closely with designers using Figma for UI/UX implementations and partnered with backend engineers to design RESTful APIs
- Led the initiative to create a well-organized codebase, employing CSS Modules and building a reusable internal component library, which enhanced development speed by 50% and ensured consistent UI across all projects.
- Guided feature development from concept to launch, ensuring the creation of performant, accessible, responsive, and user-friendly interfaces.
- Managed task breakdown and delegation to meet deadlines, while mentoring a junior developer and maintaining high standards through comprehensive code reviews.

SecurEnds, Remote

SecurEnds provides companies with a tool to automate user access reviews (UAR) across cloud and on-prem applications to meet SOX, PCI, HIPAA, GDPR, and CCPA audit requirements.

Software Developer — 2021 – 2022

- Spearheaded feature development for the SecurEnds web application, used by over 100 global customers, utilizing a tech stack of React, JavaScript, and SASS.
- Managed and developed the 'Delegate Campaigns' feature, from conception to deployment, using MySQL Workbench and REST APIs.
- Collaborated with product, QA, and offshore teams in an agile environment, ensuring effective teamwork and successful product iterations.
- Enhanced application performance and accessibility while addressing technical debt, resulting in improved, modernized code quality and development operations.

Salesforce, San Francisco

Full Stack Software Engineering Intern — 2019

- Developed a self-service customer facing tool utilizing Javascript and Ruby Sinatra that tokenized regex expressions for customers & employees to mount and ship data into the DVA Monitoring Pipeline
- Streamlined onboarding process for customers, improving ramp-up time from 3 weeks to 3 hours
